THE POWER TO KNOW

## PVAAS

POLICY BRIEF

## What Educators Should Know About PVAAS Student Probabilities

The PVAAS probabilities for reaching future academic milestones are based on prior achievement data for each student. For teachers, the projections for the current year offer a basis for differentiated instruction, for identifying students needing an academic intervention, or for determining a student's readiness for advanced coursework. A student with a very low probability is unlikely to reach proficiency without additional supports. Students with a higher probability will likely meet or exceed the proficiency cut on the upcoming assessment if the educational characteristics that created the success continue for that student.

## What prior achievement data is used in the PVAAS projections?

PVAAS uses the historical state assessment data from the most recent five years, when available, to project future PSSA performances in Math, English Language Arts, Science, and future Keystone performances in Algebra I, Biology, and Literature. Projections to future college readiness exams are also available for PSAT, AP, ACT, and SAT. The table below illustrates the assessment scores used for projections to the state and national assessments.

| Projection to... | Data Used to Calculate Projection |
| :--- | :--- |
| PSSA Math | PSSA Math English Language Arts and Science (in grades available) |
| PSSA English Language Arts | PSSA Math English Language Arts and Science (in grades available) |
| PSSA Science | PSSA Math, English Language Arts, and Science (in grades available) |
| Keystone Algebra I | PSSA Math, English Language Arts, and Science (in grades available) |
| Keystone Biology | PSSA Math, English Language Arts, and Science; Keystone Algebra I |
| Keystone Literature | PSSA Math, English Language Arts, and Science; Keystone Algebra I and Biology |
| PSAT, SAT, ACT, AP | PSSA Math, English Language Arts, and Science; Keystone Algebra I, Biology, and Literature |

This approach yields reliable results because high correlations (meaning, a predictable relationship) exist between the PSSA, Keystone, and college readiness scores across grade levels in a single subject area and across subjects. Using so many test records in the PVAAS analysis (approximately 115,000 per grade level per subject area) further improves the predictive power of the data. Toillustrate these high correlations using the 2018-19 data, the average multiple correlation obtained when predicting PSSA Math using all prior test scores ranges from 0.82 to 0.86 , in PSSA English Language Arts from 0.80 to 0.84 , and in PSSA Science from 0.77 to 0.78 . The predicted scores of Keystone content areas using prior PSSA scores has a multiple correlation ranging from 0.77 to 0.80 . In less technical terms, this means that the data used to calculate the projection has a very strong positive relationship to the actual projections.

## How good are the PVAAS projection probabilities?

To answer the question, students' test scores from the prior school year were compared to their PVAAS probabilities for achieving proficiency or a college readiness benchmark at the beginning of the school year. Students were divided into two groups based on their probabilities at the end of the previous school year. Comparisons were made for students with probabilities less than $70 \%$ and for students with probabilities equal to or greater than $70 \%$. The tables below provide the results for the statewide assessments (PSSA and Keystones) as well as college readiness assessments (ACT and AP) from a typical year of reporting in 2018-19 school year. The results are reported in the tables below and establish the validity of the individual PVAAS probabilities as an important indicator in developing individualized student academic plans.

Table 1: How often did students with PVAAS probabilities of $\mathbf{7 0 \%}$ or greater score at Proficient or Advanced?

| Grade | PSSA Math | PSSA English <br> Language Arts | PSSA Science |
| :---: | :---: | :---: | :---: |
| 3 to 4 | $92.4 \%$ | $95.3 \% \%$ | $93.3 \%$ |
| 4 to 5 | $89.6 \%$ | $92.2 \%$ | N/A |
| 5 to 6 | $89.8 \%$ | $93.4 \%$ | N/A |
| 6 to 7 | $92.0 \%$ | $91.8 \%$ | N/A |
| 7 to 8 | $92.1 \%$ | $92.7 \%$ | $93.9 \%$ |
|  | Algebra I | Literature | Biology |
| Last Grade <br> Tested | $81.9 \%$ | $94.3 \%$ | $89.7 \%$ |

Table 3: How often did students with PVAAS probabilities of 70\% or greater score at college readiness benchmarks?

| Benchmark | Percentage |
| :--- | :---: |
| ACT English 18 | $93.9 \%$ |
| ACT Mathematics 22 | $95.1 \%$ |
| ACT Reading 22 | $90.8 \%$ |
| ACT Science 23 | $92.2 \%$ |
| AP Biology 3 or higher | $90.9 \%$ |
| AP Calculus AB 3 or higher | $82.7 \%$ |
| AP English Language \& Comp. 3 or higher | $88.6 \%$ |
| AP English Literature \& Comp. 3 or higher | $81.7 \%$ |
| AP Psychology 3 or higher | $89.7 \%$ |
| AP Statistics 3 or higher | $90.9 \%$ |
| AP US Government and Politics 3 or higher | $88.3 \%$ |
| AP US History 3 or higher | $86.1 \%$ |
| PSAT 8/9 Evidence-Based Reading and <br> Writing 410 | $93.0 \%$ |
| PSAT 8/9 Mathematics 450 | $98.0 \%$ |
| PSAT NMSQT Evidence-Based Reading and <br> Writing 460 | $92.1 \%$ |
| PSAT NMSQT Mathematics 510 | $91.8 \%$ |
| SAT Evidence-Based Reading and Writing 480 | $94.9 \%$ |
| SAT Mathematics 530 | $93.4 \%$ |

Table 2: How often did students with PVAAS probabilities less than $\mathbf{7 0 \%}$ score at Proficient or Advanced?

| Grade | PSSA Math | PSSA English <br> Language Arts | PSSA Science |
| :---: | :---: | :---: | :---: |
| 3 to 4 | $23.7 \%$ | $33.0 \%$ | $36.8 \%$ |
| 4 to 5 | $16.2 \%$ | $22.9 \%$ | $\mathrm{~N} / \mathrm{A}$ |
| 5 to 6 | $15.1 \%$ | $24.7 \%$ | $\mathrm{~N} / \mathrm{A}$ |
| 6 to 7 | $14.2 \%$ | $25.2 \%$ | $\mathrm{~N} / \mathrm{A}$ |
| 7 to 8 | $14.6 \%$ | $21.3 \%$ | $28.4 \%$ |
|  | Algebra I | Literature | Biology |
| Last Grade <br> Tested | $13.3 \%$ | $25.0 \%$ | $17.6 \%$ |

Table 4: How often did students with PVAAS probabilities less than $\mathbf{7 0 \%}$ score at college readiness benchmarks?

| Benchmark | Percentage |
| :--- | :---: |
| ACT English 18 | $31.6 \%$ |
| ACT Mathematics 22 | $29.4 \%$ |
| ACT Reading 22 | $32.6 \%$ |
| ACT Science 23 | $33.6 \%$ |
| AP Biology 3 or higher | $34.7 \%$ |
| AP Calculus AB 3 or higher | $44.8 \%$ |
| AP English Language \& Comp. 3 or higher | $36.6 \%$ |
| AP English Literature \& Comp. 3 or higher | $28.1 \%$ |
| AP Psychology 3 or higher | $44.8 \%$ |
| AP Statistics 3 or higher | $44.5 \%$ |
| AP US Government and Politics 3 or higher | $44.2 \%$ |
| AP US History 3 or higher | $39.4 \%$ |
| PSAT 8/9 Evidence-Based Reading and <br> Writing 410 | $19.8 \%$ |
| PSAT 8/9 Mathematics 450 | $21.9 \%$ |
| PSAT NMSQT Evidence-Based Reading and <br> Writing 460 | $20.4 \%$ |
| PSAT NMSQT Mathematics 510 | $17.9 \%$ |
| SAT Evidence-Based Reading and Writing 480 | $35.0 \%$ |
| SAT Mathematics 530 | $28.4 \%$ |

## How accurate are the PVAAS projections?

A student's score from the end of a grade and subject reflects the student's achievement as well as the educational influence of the LEA/district, school, and teaching that they experienced. PVAAS probabilities do not account for the effectiveness of the classroom-specific curriculum, assessment, and instruction in the current year. Instead, they reflect what the student is likely to score assuming the typical schooling experience.

- A highly effective standards-aligned system at the school where a student attends can increase the likelihood that the student will reach the proficiency cut. Highly effective schools have valueadded results shaded dark blue.
- When students do not experience an effective standards-aligned system at their school, the students are less likely to score as predicted. Students with 40-70\% probabilities might not reach proficiency in these learning environments. Less effective schools have value-added results shaded red.

The projections to student performance in the 2021-22 school year use data about the relationship between test scores from the last cohort of students tested before the pandemic in order to provide projections based on a more typical year-to-year change in student achievement. The projections, along with local knowledge and resources, can assist educators with planning for students' success on future assessments.

## What are the implications for policy decisions?

Although educators may choose slightly different probability ranges from those above, the cuts of less than $70 \%$ and greater than $70 \%$ are particularly appropriate for making decisions about students. This conclusion is based on the percentage of students reaching proficiency and the percentage of students not reaching the proficiency mark in the two ranges above. However, students in very effective schools with probabilities near 70\% might also be successful. Therefore, the PVAAS Custom Student Report functionality enables educators to vary the ranges of probabilities used to identify students.
